<b>Clients Comments</b>			
<b>Observations</b> Boots is reactive in the SI, pelvic region, particularly on the right. His back is less reactive than last time. He he is a little filled in the lumbar region, but there is no pain or tension associated with it. Worked on his stifles, SI and hindquarters. I also did some work on his traps, which showed tension. Overall he seems to be doing much better.			
<b>Rest from Work</b> Today and tomorrow, resume Sunday.			
<b>Work Recommendations</b> Watch him in laterals, he may show instability after the stifle work.
